Create #1 Addendum

Please follow the instructions for the Official Create Performance Task except for the following:

Part 2c:

For Create #1, explain two pieces of complex code in your program, how they work separately, and how they work together. At least one of these should be a selection (if) block.

Part 2d:

For Create #1, include a screenshot of a procedure that you created independently and explain how it reduces the complexity of your program. This must be a procedure that you create and name, not a built-in event-handler like button.click.
